

Emery Telcom is launching a local channel with its new television product. We hope that this channel will provide a forum for the residents of our area to present information and share their ideas and talents. Accordingly, we are in the process of obtaining as much content as possible. We have purchased the necessary filming equipment, and have hired a full-time video content editor, Micah Iverson. We are now looking for help from the community to start providing content. We have brainstormed on some possible segments:

Sports: We have contacted both Carbon High School and Emery High School and are working with the schools to record the various sports. We also would like to have some content from Green River High School, the junior highs, and the league sports.

County Cruising: We have thought about the possibility of a segment that features the various aspects of Carbon and Emery Counties that we all enjoy. This could involve tours of the desert, or happenings in the various communities.

A Step Back In Time: We have also thought about the possibility of a segment that explores the history of the area and the people who live here. This would provide a forum for the documentation of the historical sites and people in the counties.

Local News: We would like to work with newspapers and radio stations to provide a brief segment on the local news in the counties.

Community Involvement: We believe that this channel could also provide a method of access for many of the residents to become involved with the various public meetings happening in the counties.

Outdoors: We know that there are many outdoor enthusiasts that live in our communities. We think that this channel could provide a method of sharing everything from fishing holes to rock climbing expeditions.

Business Highlights: The local economy is essential to all of our residents. We would like to help promote this economy by helping to introduce the many local businesses to the residents of the community. Further, we believe that a segment highlighting local businesses will promote the products and services they promote.

Home Cooking: We know that there are many local cooks and recipes that could be shared with the community and help to enrich all of our lives.

Of course the list above is only a brief group of the possible things that could be shared with the community. If you believe that you could help with one of the above segments, or have another idea, please contact Micah Iverson. Emery Telcom Video will work out compensation for those providing regular segments. Also, we would encourage community to submit their videos, which they believe would be interesting to their neighbors (of course certain decency and other criteria must be met).

We think that the ETV channel will provide our customers with an amazing venue for expression and also will provide a forum for advertising. Please let us know how you can help.

Thanks.
